15-10-2026 Activity-5 Roll No: 19

Name : K. Akhileswara Reddy Course code : DSA0601

Regno : 192325068

Chart 1 (Lab duration, n=30)

Normal – Yes

Shape : Normal

Evidence : The points follow the red line from end to end with no curve or S-shape, only small random scatter.

Chart 2 (Typing speed, n=80)

Normal – No

shape : Left-Skewed (with a few outlier)

Evidence : The upper end flattens at about 38-40 WPM, below the line. The lower tail drops far below the line.

Chart 3 (Commute time, n=40)

Normal - No

Shape - Normal with outliers)

Evidence : Most points (about 33-44min) lie on the line. Two points at about 49 and 53 min sit well above it and one at abt 30min lies slightly below it.

Chart 4 (Mobile data, n=60)

Normal - No

shape : Right-Skewed

Evidence : The curve is convex. Many values are flat at about 600MB, above the line, while the upper points rise steeply to about 1000-1160MB.

Part B

B1.

Departure: chart3 has high-end outliers at about 49 and 53 min, well above the reference line.

Remedy: first check those values for recording errors.

B2:

ggplot(df, aes(sample=value)) + stat_qq() + stat_qq_line()

Blank1: stat_qq()

Blank2: stat_qq_line()
